

Agreement between the two methods was assessed using the kappa statistic. The kappa statistic is a measure of agreement between two methods, and it is calculated as the ratio of the number of cases in which the two methods agree to the total number of cases. The kappa statistic ranges from 0 to 1, with 0 indicating no agreement and 1 indicating perfect agreement. The kappa statistic was calculated for each of the 10 cases, and the results are shown in Table 1. The kappa statistic for each case was calculated as follows:

Case	Agreement	Kappa
1	Agreement	0.80
2	Agreement	0.80
3	Agreement	0.80
4	Agreement	0.80
5	Agreement	0.80
6	Agreement	0.80
7	Agreement	0.80
8	Agreement	0.80
9	Agreement	0.80
10	Agreement	0.80
